## OBJECTIVE

---

Seeking an entry-level position in Web and Software Developer with a passion for creating innovative solutions to drive business success and enhance user experiences.

## PROJECTS

---

### Smart City Traveler

A traveler visiting a city can use the Android software Smart City Traveler to plan their itinerary by indicating their interests and the kinds of locations they would want to see.

**Technology-** Our application was also built on the Android Studio IDE. XML is used in our application for frontend development. Java is used for the backend development of our application. Gradle is a build system (open source) that is used to automate building, testing, deployment, etc. The Google Maps Direction API, Foursquare Places API and Geocoding API is used. Conclusion Integration with more location-based services

### Cloud Kitchen Website

The CloudKitchen platform represents an innovative step in the food service industry, utilizing modern web technologies to bridge the gap between food service providers and consumers seeking convenient, high-quality meal options.

**Technology** - Developed a website for a cloud kitchen model using HTML, CSS, PHP, and JavaScript. - Created user-friendly forms for sign-in, registration, and service provision. - Connected users who want to order home-made food with service providers.

### E-commerce website

It is built around an online store where we may purchase or sell plants.

**Technology-** HTML, CSS and JavaScript for structure designing. PHP for the backend. Conclusion Integration with more e-commerce based services.
